

Scholls Area Pipeline Project

The Willamette Water Supply Program Scholls Area Pipeline Project will be built in multiple phases. Combined, the Scholls Area pipeline construction package consists of more than seven miles of 66-inch-diameter welded steel pipe.

South of Scholls Ferry Road

The first phase of construction is a partnership with Washington County's Roy Rogers Road widening project from Scholls Ferry south past Bull Mountain Road. Road construction is scheduled to begin in 2018 with pipeline installation starting in 2019.

The coordinated and combined construction of the pipeline and the road widening will reduce project costs. Partnering opportunities also reduce community and neighborhood impacts by eliminating the need for multiple construction projects.

More information about the County's road project can be found on the [County's website](#).

Scholls Ferry Road to Farmington Road

Future phases of the pipeline will continue north and west, along SW Scholls Ferry Road to Title Flat Road, then north on Grabhorn Road where the pipeline will connect with the Willamette Water Supply's new water storage tanks. More information about the water storage tanks can be found on the [strong and safe water tank fact sheet](#).

From the water storage tanks, the pipeline will continue west to SW Clark Hill Road, and north to SW Farmington Road, where the pipeline will connect with future sections of the Willamette Water Supply pipeline. Design of this portion of the pipeline has begun, with construction planned to start in 2021.

Our Future Water Supply

Tualatin Valley Water District (TVWD) and the City of Hillsboro are partnering to develop the mid-Willamette River at Wilsonville as an additional water supply. When completed in 2026, this new system will be one of Oregon's most seismically-resilient drinking water systems—built to better withstand natural disasters, protect public health, and provide a stable water supply for present and future generations.
