

Raw Water Facilities (RWF)

In coordination with the City of Wilsonville, the Willamette Water Supply Program (WWSP) team will begin building improvements in and around the Willamette River Water Treatment Plant (WRWTP) in Wilsonville in 2020. These improvements include:

- **Improved pump station** that will increase pumping capacity and supply water to the new Willamette Water Supply System (WWSS) water treatment plant near Sherwood.
- **Seismically reinforce the Willamette River bank** to prevent slope failure to preserve the intake structure and help maintain operations after a large earthquake.
- **Increased intake capacity** through new fish screens to allow additional water to be withdrawn from the Willamette River to accommodate planned growth.
- **New electrical building and standby power** (north of existing WRWTP) to add reliability in case of outages and provide power to pump water to the WWSS water treatment plant near Sherwood.
- **A new raw water pipeline** will be constructed through the WRWTP Park to the new WWSS water treatment plant near Sherwood.

Existing WRWTP pump station

Design of these improvements is underway. The existing WRWTP will remain in operation throughout construction. The WWSP team will coordinate closely with neighbors, nearby businesses and the City of Wilsonville throughout design and construction.

Tualatin Valley Water District (TVWD) and the City of Hillsboro are jointly developing the Willamette Water Supply System (WWSS) to serve their customers' future drinking water needs. The City of Beaverton is also considering joining the partnership. The WWSS will draw water from the mid-Willamette River at Wilsonville and, once treated, deliver it to TVWD and City of Hillsboro customers. The Willamette Water Supply Program is being funded by TVWD and City of Hillsboro ratepayers. Any new partners would pay their proportional share.

Our Future Water Supply

The Willamette Water Supply Program (WWSP) is a partnership between Tualatin Valley Water District and the City of Hillsboro to develop the mid-Willamette River at Wilsonville as an additional water supply source. This new system, when operational in 2026, will provide a reliable water supply for the region while also helping water system operators balance supply during times of drought or other supply interruptions, and recover more quickly after a large natural disaster.
