

South Hillsboro Area Pipeline

The Willamette Water Supply Program (WWSP) is coordinating with the City of Hillsboro, Washington County, and private developers to install portions of the new water pipeline in South Hillsboro. Synchronizing construction results in cost savings, reduced traffic impacts, and fewer construction projects.

Approximately 4,100 linear feet of pipeline has been installed beneath Cornelius Pass Road – between Kinnaman Road and TV Highway – in coordination with the South Hillsboro development. This portion of the pipeline can connect to the existing City of Hillsboro water system to serve the South Hillsboro residential development along with water from the Joint Water Commission.

Willamette Water Supply pipeline construction through South Hillsboro continues.

Construction Summer 2020

Construction of approximately 10,700 linear feet of pipeline – between Farmington Road and Kinnaman Road – will begin this summer. This section of pipeline will connect to the already installed pipeline beneath Cornelius Pass Road at the northern end, and a future Tualatin Valley Water District pump station at Farmington Road and 209th Avenue at the southern end. The pipeline route follows the future Cornelius Pass Road alignment, Rosedale Road and 209th Avenue.

Future Coordination with Washington County

WWSP will be constructing the drinking water pipeline in coordination with [Washington County's Cornelius Pass Road](#) widening project between TV Highway and Frances Street. Construction for this approximately 3,800 linear foot segment is anticipated to begin in 2022.

Our Future Water Supply

The Willamette Water Supply Program is a partnership between Tualatin Valley Water District and the cities of Hillsboro and Beaverton to develop the mid-Willamette River at Wilsonville as an additional water supply source. This new system, when operational in 2026, will provide a reliable water supply for the region while also helping water system operators balance supply during times of drought or other supply interruptions, and recover more quickly after a large natural disaster.
