

Scholls Ferry Area Pipeline Project

The Willamette Water Supply Program Scholls Ferry Area Pipeline Project (PLM_5.0) consists of more than seven miles of 66-inch-diameter, welded steel pipe. The pipeline is being constructed in multiple phases to promote coordination with public and private road improvement projects. Partnering on road projects reduces community and neighborhood impacts by eliminating the need for multiple construction projects.

The 66-inch pipeline was installed on Scholls Ferry Road, Tile Flat Road and Roy Rogers Road.

Three segments of pipeline, three different stages

Construction underway: PLM_5.1, along Roy Rogers Road from SW Scholls Ferry Road south past SW Bull Mountain Road, is a partnership with [Washington County's Roy Rogers Road widening project](#). Construction began in 2018. The pipeline is installed, and work continues on the road widening project. The project is scheduled to be complete in 2021.

Construction complete: Construction of PLM_5.2, along SW Scholls Ferry Road to SW Tile Flat Road and ending just north of the SW Tile Flat and SW Grabhorn Road intersection, was coordinated with new residential development along Scholls Ferry and Tile Flat Roads. Construction began in 2019 and is now complete.

Upcoming construction: Design of PLM_5.3, Grabhorn Road to Rosedale Road is complete. This section of the pipeline will travel north along Grabhorn Road to the new, future water storage tanks on Cooper Mountain, and then west on private property until it reaches the existing Bonneville Power Administration (BPA) corridor. The alignment then moves north following the BPA corridor to Farmington Road. North of Farmington Road, the alignment is within a potential future Cornelius Pass Road corridor through private property where it will connect to the South Hillsboro Pipeline Project (PLW_1.0). Construction is anticipated to begin in 2022, in coordination with construction of the water storage tanks on Cooper Mountain (RES_1.0).

Our Future Water Supply

The Willamette Water Supply Program (WWSP) is a partnership between Tualatin Valley Water District, the City of Hillsboro and the City of Beaverton to develop the mid-Willamette River at Wilsonville as an additional water supply source. This new system, when operational in 2026, will provide a reliable water supply for the region while also helping water system operators balance supply during times of drought or other supply interruptions, and recover more quickly after a large natural disaster.
