

Willamette Water Supply Program
1850 SW 170th Ave.,
Beaverton, OR 97003

Dear neighbor,

Beginning in December, a Willamette Water Supply Program Metzger Pipeline East equipment and supply storage area will be set up in the empty field in front of Whitford Middle School. Please see the back of this flyer for a site map and pictures of a typical storage area. The central location and close access to SW Scholls Ferry Road make this location ideal to help construction crews operate more efficiently and minimize traffic disturbances.

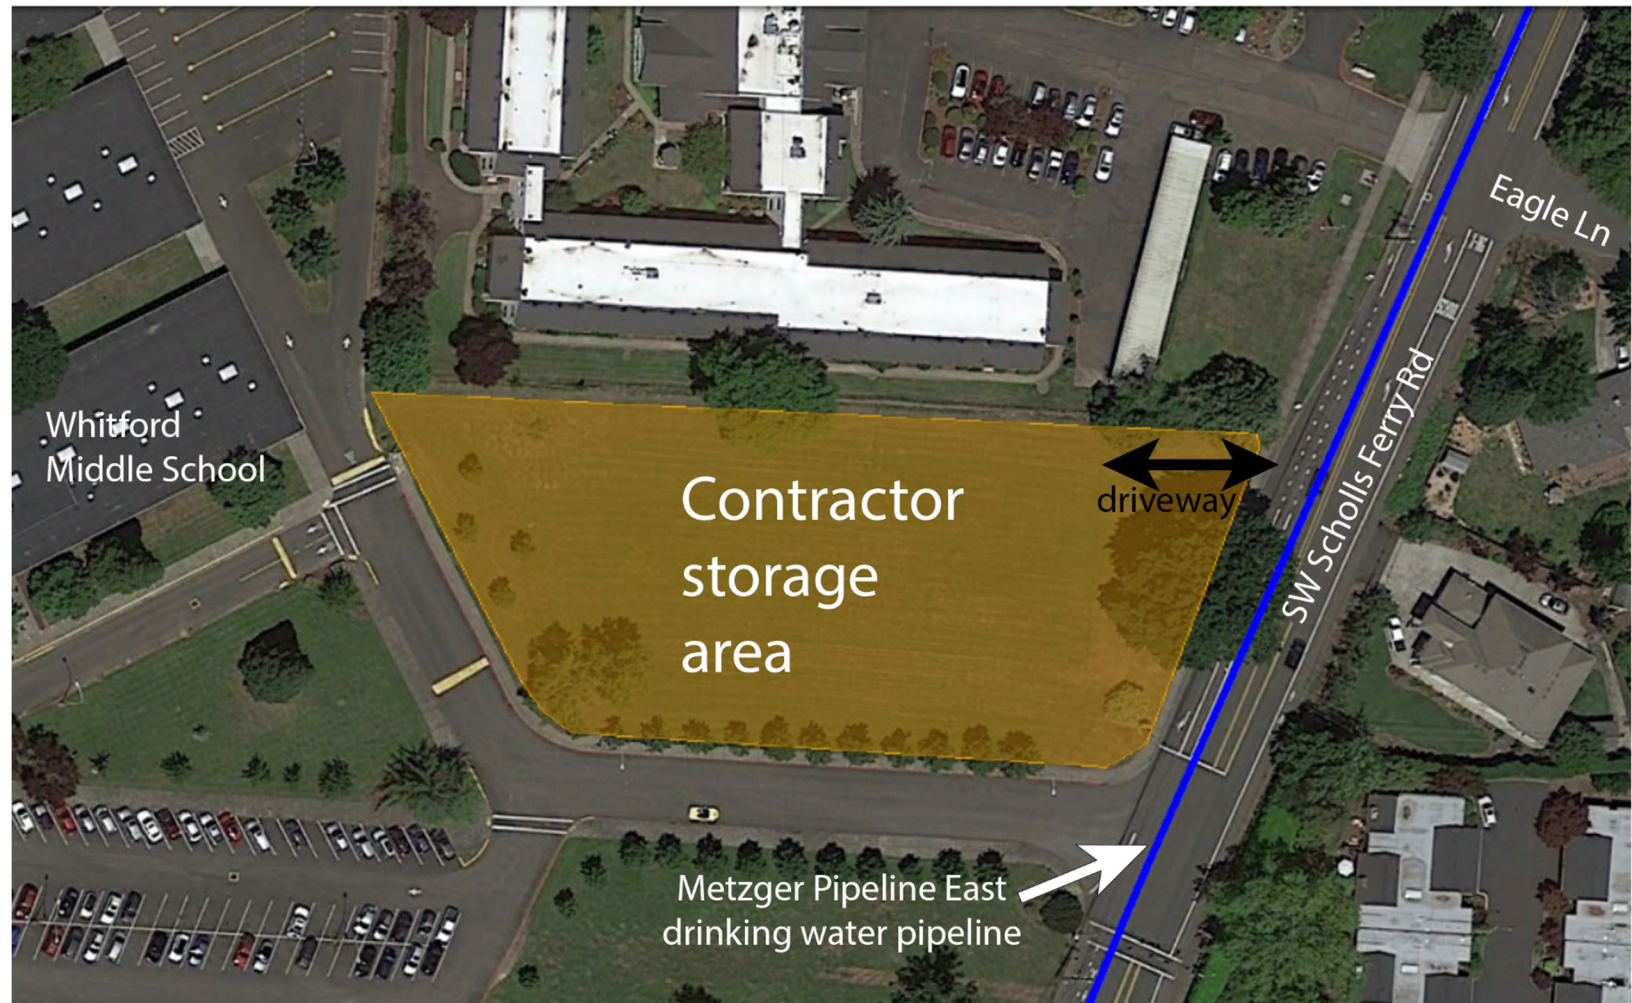

The construction team is working to minimize disturbances by installing privacy fencing along the north side, centralizing most construction operations out of a second storage area away from neighborhoods, and minimizing evening and weekend construction activity. In addition, school managers and the construction team are working together to ensure student and public safety.

Hours are M-F with intermittent Saturdays, generally 7 a.m. to 7 p.m. with regular 24-hour operations during night-work construction. The site will remain active until late 2023.

We look forward to working with our neighbors during construction of this important regional drinking water project.
