

South Hillsboro Area Pipeline

The Willamette Water Supply Program (WWSP) is coordinating with the City of Hillsboro, Washington County, and private developers to install portions of the new water pipeline through South Hillsboro. Synchronizing construction results in cost savings, reduced traffic impacts, and fewer construction projects.

PLW 1.1: SE Kinnaman to TV Highway

This first phase included installing the drinking water pipeline in coordination with South Hillsboro transportation improvements, including an improved Cornelius Pass/TV Highway intersection and the extension of Cornelius Pass Road. This phase of the project was completed in 2019. This portion of the pipeline connects to the existing City of Hillsboro water system to serve the residential development— well before the remaining Willamette Water Supply pipeline is completed in 2026.

The South Hillsboro Area Pipeline segment is approximately 28,600 feet in length.

PLW 1.2: TV Highway to SW Frances

In partnership with Washington County’s widening of Cornelius Pass Road, to five lanes with bike, pedestrian and safety enhancements between SW Frances Street and TV Highway, WWSP is constructing a 48-inch drinking water pipeline in the public right of way. To learn more about the Cornelius Pass Road project, visit Washington County’s [project page](#). The project is under construction with an expected completion date of December 2023.

PLW 1.3: SE Kinnaman to Farmington

This section includes the pipeline south from SE Kinnaman Road to SW Rosedale Road, in the future Cornelius Pass Road extension right of way. The pipeline continued east along SW Rosedale Road and south along SW 209th Avenue to the intersection of SW Farmington Road and SW 209th Avenue where it connects to the Tualatin Valley Water District’s distribution system. This section will be complete in winter 2022.

Our Future Water Supply

The Willamette Water Supply Program is a partnership between Tualatin Valley Water District and the cities of Hillsboro and Beaverton to develop the mid-Willamette River at Wilsonville as an additional water supply source. This new system, when operational in 2026, will provide a reliable water supply for the region while also helping water system operators balance supply during times of drought or other supply interruptions, and recover more quickly after a large natural disaster.
