

# Willamette Water Supply

## *Our Reliable Water Future*

### Scholls Ferry Road Area Pipeline Project

The Willamette Water Supply Program Scholls Ferry Road Area Pipeline Project (PLM\_5.0) consists of more than seven miles of 66-inch-diameter, welded steel pipe. Construction of the pipeline is occurring in multiple phases to promote coordination with public and private road improvement projects. Partnering on projects reduces community and neighborhood impacts by eliminating the need for multiple construction projects.

#### Construction in Progress

Construction of PLM\_5.3, Grabhorn Road to Rosedale Road is underway. This section of the pipeline travels north along Grabhorn Road to the new, future water storage tanks on Cooper Mountain, and then west on private property until it reaches the existing Bonneville Power Administration (BPA) corridor. The alignment then moves north following the BPA corridor to Farmington Road. North of Farmington Road, the alignment is within a potential future Cornelius Pass Road corridor through private property where it will connect to the South Hillsboro Pipeline Project (PLW\_1.0). Construction began in 2022, at the same time as construction of the water storage tanks on Cooper Mountain (RES\_1.0).

Construction of all seven miles of the Scholls Ferry Road Area Pipeline Project is anticipated to be complete in 2025.

#### Partnership Projects, Construction Complete

PLM\_5.1, along Roy Rogers Road from SW Scholls FERRY Road south past SW Bull Mountain Road, was constructed in partnership with Washington County's Roy Rogers Road widening project.

Construction of PLM\_5.2, along SW Scholls Ferry Road to SW Tile Flat Road and ending just north of the SW Tile Flat and SW Grabhorn Road intersection, was coordinated with new residential development along Scholls Ferry and Tile Flat Roads.

### Our Future Water Supply

The WWSP is a partnership between Tualatin Valley Water District, the City of Hillsboro and the City of Beaverton to develop the mid-Willamette River at Wilsonville as an additional water supply source and will be paid for by those ratepayers. This new system, when operational in 2026, will provide a reliable water supply for the region while also helping water system operators balance supply during times of drought or other supply interruptions, and recover more quickly after a large natural disaster.
